No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The hybridoma produced a monoclonal antibody (SCH94.03) useful in promoting CNS remyelination. The SCH94.03 light chain amino acid sequence is given in AAR84553.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          immunosuppression; tissue transplantation; graft; L chain; V region; T-helper cell inhibition; transplant rejection; MAb; interleukin-2 receptor.

                                                                                                                                                                                                         The sequences given in AAR28670-71 were encoded by plasmids which were used in example to illustrate the production of a human antibody which recognises human interleukin-6 receptor (IL-6R). The antibody which comprises light (L) chain and heavy (H) chain variable regions which were derived from a mouse monoclonal antibody produced from the hybridoma PM1 which contained the plasmids pPM-k3 and pPM-h1. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antibody reactive with Fas ligand capable of inducing apoptosis - used for diagnostic assay of Fas ligand in body fluids and for treatment of diseases in which Fas ligand/Fas antigen is involved
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is the light chain of the mouse anti-apoptosis inducing human Fas ligand, monoclonal antibody, 1919. The antibody can be used in a Fas ligand assay, e.g. an enzyme linked immunosorbant assay, to diagnose diseases in which the Fas ligand/Fas antigen system is implicated, e.g. hepatitis LG, human immunodeficiency virus, garkf(host disorders, ulcerative colitis or sequelae of myocardial infarction. The antibody may also be used to treat such diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           93.9%; Score 621; DB 18; Length 127; 93.7%; Pred. MAD MT 15.1 is deposited as clone 15-1/P3/14 (ECACC 90090705). The anti-CD4 antibody is used with at least one anti-IL2R alpha or beta antibody. Individually the antibodiss are strongly inhibiting and when used together their immunosuppressive properties are improved; they synergistically inhibit T-helper cell proliferation to effectively inhibit transplant rejection at low see also AAQ36608-Q36616.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence is used in the prodn. of a chimeric antibody mol. comprising two light chains and two heavy chains, each having a constant region (human) and a variable region (murine) having specificity to an antigen bound by murine monoclonal antibody (MAb) ME4. The chimeric antibodies can be used for any purpose for which the original murine MAbs can be used, with the advantage that they are more compatible with the human body. They are esp. used for the diagnosis and treatment of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 MVSSAQFLGLLLLCFQGTRCDIQMTQTTSSLSASLGDRVTISCRASQDISSYLNWYQQKP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              is used for generating a mouse anti-humanes anti-budy. The invention provides the use of Fas antagonist as an agent for the treatment and prevention of apoptosis-related diseases. The Fas antagonist can be a partial Fas antigen peptide containing the search anti-fas antial Fas antigen peptide containing the search anti-fas anti-fas antibody. Or an anti-Fas ligand antibody, where the antibody is preferably a humanised antibody. The Fas antagonist is used in the treatment and prevention of diseases such as myocardial infarction, heart disease, ischemic restrements of the heart, liver or kidney, and endocoxic shock, and also as an organ preservative in transplantation. The agent is of low toxicity but effectively inhibits the Fas/Fas ligand
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DGTIKLLIYYTSRLHSGVPSRFSGSGSGTDYSLTINNLEQEDIATYFCQQGNTLPYTFGG 120

           Chimeric antibody; monoclonal antibody; ME4; antibody engineering; tumour; antigen; breast carcinoma; colon carcinoma; lung carcinoma; ovary carcinoma; melanoma; cancer; diagnosis; therapy; light chain.
                                                                                                                                                                                                                                                                                                                                                    Chimeric mouse-human antibodies - recognise a human tumour antigen, used for the treatment and diagnosis of human cancers
                                                                                                                                                                                                                                                                                                                                                                                                           The light chain variable region (AAW06215) of mouse monoclonal antibody ME4 is the product of a cDNA clone (AAT43440) isolated from a ME4 hybridoma cDNA library. MAb ME4 (IgG1) binds to an antigen that is expressed on the surface of human lung, breast, colon and ovary carcinomas and melanomas, but not on most normal adult tissues. The light chain and heavy chain variable regions (see also AAW06216) of ME4 can be linked to human constant regions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and expressed in transformed host cells. Novel mouse-human chineric antibodies (see also AAW06209-14 and AAW06217-18) can be produced that have specificity to human tumour antigens for use in the treatment and diagnosis of human cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             93.9%; Score 621; DB 18; Length 128; 93.7%; Pred. The present sequence represents the light chain variable region of murine antibody ME4. The sequence was used to create chimeric mouse-human immunoglobulins which recognise the human tumour antigen bound by antibody ING-1 (produced by hybridoma cell line ATCC HB 9812). The chimeric antibodies also have an antigen-binding site that competitively inhibits the binding of antibody ING-1, and mediate complement-dependent cytolysis of target cells or antibody-dependent cellular cytocoxicity to target cells. The chimeric antibodies can be used for therapeutic purposes in the

The invention describes an antibody comprising a human constant region and a variable region having specificity for the human tumour antigen. Coming a deposited with ATCC, and the ING-1 is produced by call line HB9812 as deposited with ATCC, and the ING-1 is produced by call line the HB9812 as deposited with ATCC, and the antibody has the same affinity as the ING-1 for the human tumour antigen. The antibody is useful in an imaging method for revealing the presence of the antigen; for use in an imaging method for revealing the presence of a label-detectable containing the antigen, the presence of a label-detectable antigen in an antigen in an imaging method for revealing the presence of a label-detectable containing the antigen, detecting the label and relating the guspected of containing the antigen, detecting the label and relating the cattying an antigen by contacting the calls with the antibody and callowing the killing to occur. The antibodies are useful in tumour cells but do not bind detectably to normal cells, org., fibroblasts, endothelial cells or pepthelial cells in the major organs. The high biological activity of the chimeric antibodies against human tumour cell lines combined with minimal reactivity with normal tissues imply that these antibodies may mediate selective destruction of caping clearance from the body relative to the original murine mabs. This creases the colearance chameric antibodies increases their resistance to clearance enhances the potential utility of these chimeric antibodies, and contibodies, and continued an enumour cell as their derivatives, in tumour diagnosis and therapy. This is the amino acid sequence of a mouse antibody light chain arrival.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antibody for detecting antigen in animal or killing cells carrying antigen comprises human constant region and variable region having specificity for human tumor antigen bound by ING-i antibody
                                                                                                                                                                                                                Mouse; human tumour antigen; anti-human tumour antigen-antibody; ING-1 antibody; cell line HB9812; immunoassay; imaging; tumour diagnosis; tumour therapy; cytostatic; light châin variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chang CP;

See AAR39266 for the heavy chain sequence. The antibody is specific for the GPIIa/IIIb protein and inhibits platelet agglutination. The Ig is thus useful in the treatment of thrombosis.

                      chain, used in the method of the invention involving the creation of a humanised in the method of the invention involving the creation of a humanised ig is capable of binding to GPID/IIIa and inhibiting platelet aggregation and also the releasing reaction of platelets. The Ig can be used for treating cardiovascular diseases and thromboembolic disorders, e.g. acute mycoardial infarction, unstable angina, stroke, transient ischemic episodes, deep vein thrombosis and pulmonary embolism, extraocrporeal cardiopulmonary circulation. The Ig can also be used in diagnosing the presence and location of a thrombus, or certain types of cancer cells which develop GPID/IIIa on their surfaces, for the detection of GPIID/IIIa antigens or for isolating platelets.

The sequences given in AAR29010-11 were encoded by plasmids which were used in example to illustrate the production of a human antibody which recognises human interleukin-6 receptor (IL-6R). The antibody which comprises light (L) chain and heavy (H) chain variable regions which were derived from a mouse monoclonal antibody produced from the hybridoma AUK146-15 which contained the plasmids p146-k3 and p146-h1. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                            1 MVSSAQFLGLLLCFQGTRCDIQMTQTTSSLSASLGDRVTISCRASQDISSYLNWYQQKP

                                                                                                                                                                                                                  A monoclonal antibody which reacts only with the alphav chain of human alphav integrins; which blocks attachment of alphav integrin bearing cells to integrin substrate; which reverses established cell matrix interactions caused by alphav integrin; which blocks tumour development and which has no cytotoxic activity, may be used to treat tumours, especially melanoma (but also glioma, carcinoma) optionally coupled to a cytokine such as interleukin-2. The monoclonal antibody may also be used for diagnostic imaging of tumours and assesment of tumour growth when conjugated to a radio opaque-agent.

                       monoclonal antibody (MAb), 1C11, and is specific for an HIV-1
viral antigen. It is used in the construction of a chimeric
MAb comprising heavy and light chains having murine V regions
and human C regions. The chimeric MAbs are more effective than
murine MAb IC11 since they have an increased compatibility in
humans. The heavy and light chain V-regions are joined by
manipulating their respective joining (J) regions, to generate
c restriction enzyme recognition sites. The chimeric MAbs can be
used a immunoconjugates, in association with e.g. toxins for HIV
treatment. They can also be used in diagnosis of HIV.

                                                                                                                                                                The mouse VL gene product may be used to produce chimeric mouse-
human Abs against HIV-1 comprising human Ig constant regions and
murine variable regions. These novel sequence are useful in
treatment, diagnosis and prophylaxis of HIV infections, and may be
produced by a bacterial, yeast or mammalian expression system.
